

# Problem Statement

Sasuke is too busy practicing for his new jutsu and was unable to eat his favourite Ichiraku Ramen as it takes a lot of time for Ramen to get prepared. You have to create an application for Ichiraku ramen where the customers can order ,check status and pay online

# Techonlogies

- HTML
- CSS
- Java Script
- Figma
- Canva
- BootStrap

# Our Solution

Since Sasuke wants to eat Ichiraku Ramen but he was facing problem in making ramen as it takes a lot of time to cook.

So we thought of a solution and decided to build a website where Sasuke can now order not only Ramen but so many dishes available in our website anywhere anytime.

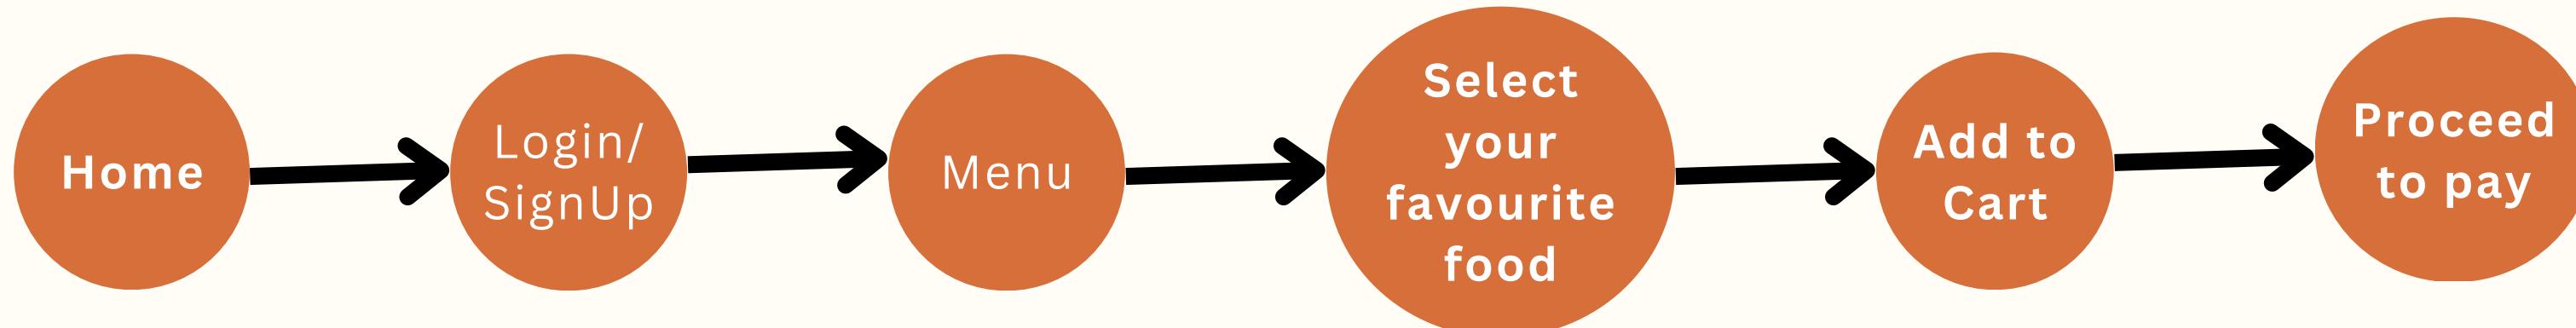

We are creating a website which includes:

- Landing Page
- Sign in/ Sign up Page
- Menu
- Add to Cart
- Rating System

# Explanation of Project

We have created a Home page, from the home page first you have to login or signup then the menu page will open, from their choose your favourite dish, Add to cart and then proceed for payment.

We have used Html CSS JavaScript and Bootstrap for creating a UI

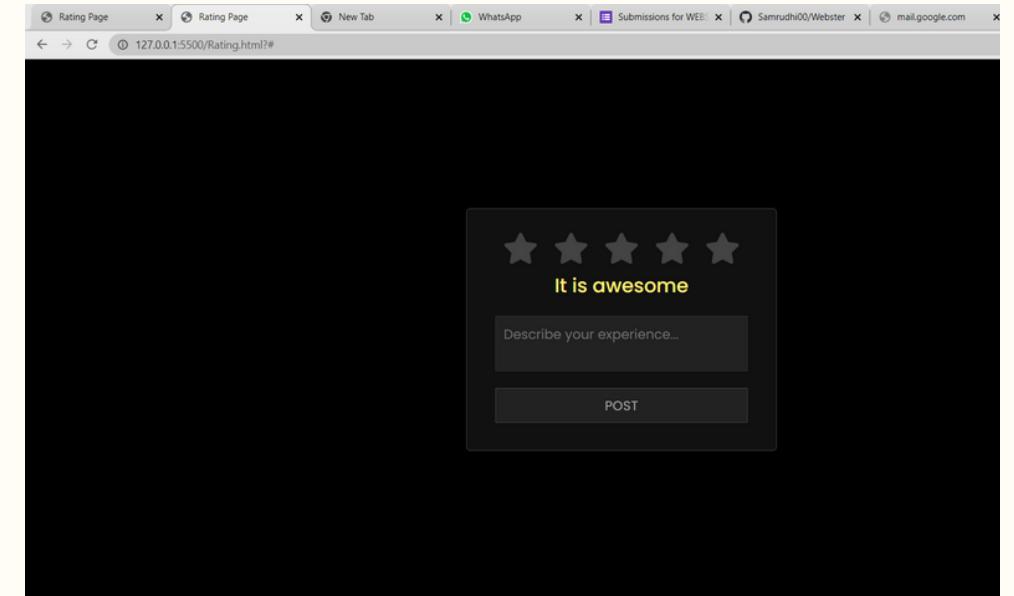

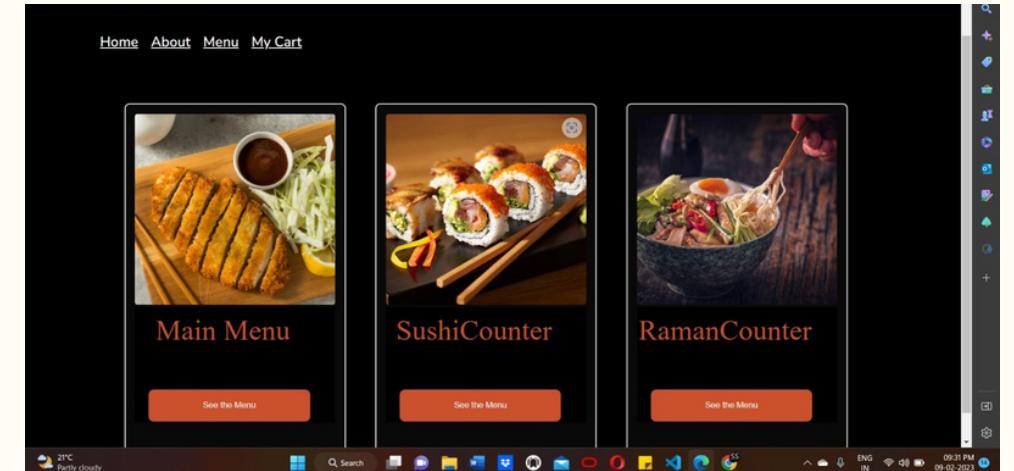

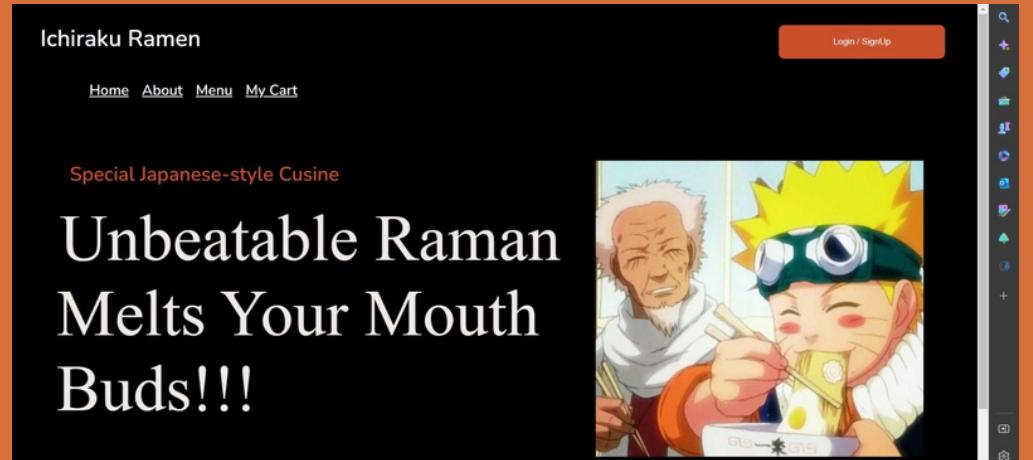

# Ichiraku Ramen

Special Japaneese food
